

The Unit of Functional Proteomics and Metabolomics at the Centro Cardiologico Monzino in Milan, is looking for a research Technician to perform untargeted and targeted metabolomic analysis in the field of cardiovascular diseases.

We are looking for an enthusiastic, motivated person, with a proven track record in mass spectrometry. Demonstrated ability in interpersonal communication and collaboration, as well as strong initiative and ability to work independently, to drive the projects forward are essential.

Requirements: Master Degree in one of the following discipline: Chemistry, Biology, Biochemistry. Strong motivation and research commitment; excellent analytical and organization skill.

Competitive salaries will depend on the candidate's track record and experience.

The CCM is a Scientific and Clinical Institute highly specialized in cardiovascular diseases and recognised by the Italian Ministry of Health as a Scientific Institute carrying out basic research and clinical activities of relevant national interest. At CCM, the Research Units focus their activity towards solving major cardiovascular research problems in strict conjunction with the research developed by cardiologists and heart surgeons working at Monzino.

Applicants should contact Dr. Cristina Banfi, sending an e-mail with a brief description of interests and a CV at: [cristina.banfi@ccfm.it](mailto:cristina.banfi@ccfm.it). <https://www.cardiologicomonzino.it/en/research-units/unit-of-proteomics/2/>
